

Public Health Genomics Population Health Sciences 810-888 Spring 2020, 1 Credit

Tuesday 5:30-6:30 pm · HSLC 3110A

Instructors:

Corinne Engelman, MSPH, PhD
Professor, Population Health Sciences

Patrice Held, PhD
Assistant Professor, Dept. of Pediatrics

The field of public health genomics merges the study of human genetics with the practice of medicine and its application to public health. Knowledge gained from genomic research, considered in an ethical, legal, and social implication context, is applied to disease diagnosis, treatment, and prevention, through the enactment of health services, programs, and policies.
